Subject: Today's Call with the Scrap Tire Workgroup

Hi Nicole,

Just wanted to give you a quick briefing with respect to the ORD-Scrap Tire call this afternoon. Overall the presentation part of the call was relatively short, only lasting about 20 minutes. Monica explained the background of the study and the work that has been done to-date. That we've collected samples from TC plants and fields and are working on the chemical characterization part of it and that the literature review/data gaps analysis is online as part of the status report. The exposure characterization is on an uncertain timeline right now because of the FR notice, but that it is one of the next things they're working on.

There were two questions from the phone: one from someone who works for Liberty Tire who asked if current funds were sufficient to continue funding the project until completion. Monica replied stating that we are on a CR until the end of April, and after that we should know more. The other was about the completion date of the chemical characterization piece. Monica replied that they are likely to release all the results at the same time to paint a full and complete picture of the situation.

See you tomorrow!
Chris
